Elastic Load Balancing (ELB)

What is Elastic Load Balancing (ELB)?

- Distribute workloads
- Distribute incoming application traffic
- Like traffic police

WAY TO REINVENT YOURSELF

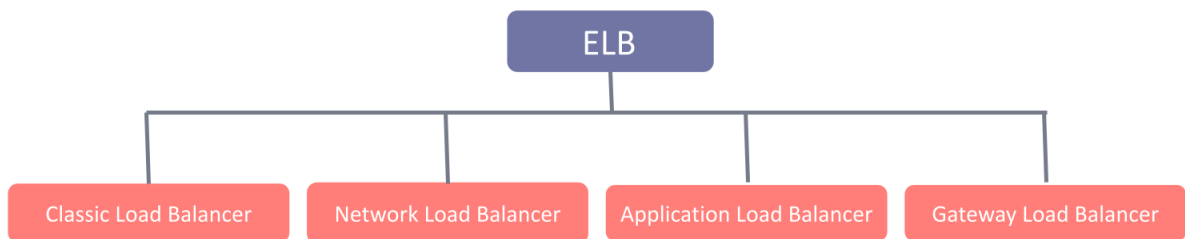

Elastic Load Balancing (ELB)

How ELB works?

Elastic Load Balancing (ELB)

Types of ELB

Elastic Load Balancing (ELB)

	Application Load Balancer	Network Load Balancer	Classic Load Balancer	Gateway Load Balancer
Port	HTTP, HTTPS	TCP/SSL	HTTP, HTTPS and TCP/SSL	Listen all ports
Use case	Control of HTTP and HTTPS traffic.	TCP traffic when high performance is required.	Classic Load Balancer can do what others do	Gateway for distributing traffic across multiple virtual appliances
